Card Printer

DASCOM

DC-7600

Overview

The DASCOM DC-7600 uses ReTransfer printing, which prints the image on a film first and then transfers it to the card. This method allows for Over-the-Edge and heavy duty printing, and works well with different card types for various professional industries.

Product Highlight

- Industrial and commercial grade design
- High resolution printing with 600 dpi
- High speed printing resulting to high productivity
- Over-the-edge full card printing
- High-capacity card feeder

DC-2300

Overview

The DASCOM DC-2300 is a compact and fast direct thermal card printer with Edge-to-Edge printing, easy ribbons, and an OLED display. It prints high-quality ID, membership or loyalty cards.

Product Highlights

- High resolution printing up to 300 x 1200 dpi
- Fast print speed up to 900 cards per hour in monochrome and up to 180 cards per hour in colour
- Edge to edge card printing
- Easy to use
- Compact design with small footprint
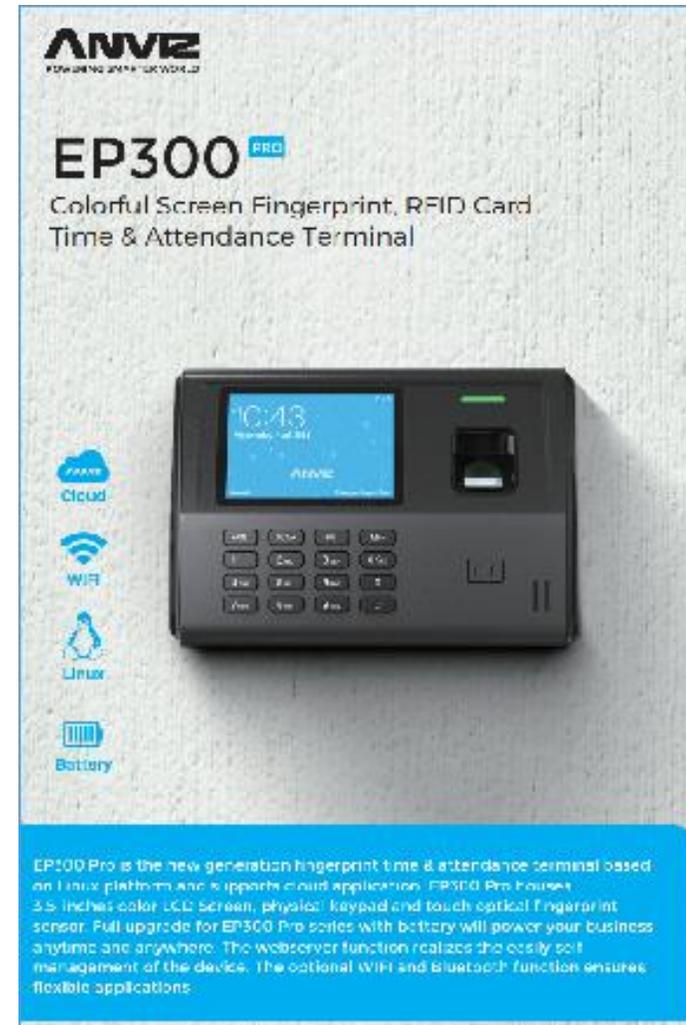

DC-240

The DASCOM DC-240 is a direct thermal card printer especially designed for front-desk applications. With a compact design this printer doesn't use much space on your desk but delivers fast and crisp results. With a resolution of up to 300 x 600 dpi fine details are visible and with a print speed of up to 155 cards/hour in colour even large print jobs can be done in a short time. Thanks to Edge-to-Edge printing, the DC-240 is the perfect partner for employee ID, membership or loyalty cards. Easy exchangeable ribbons and an OLED display on the front informing about the actual status makes the daily work simple.

Biometrics

EP300 Pro
Color Screen Fingerprint, RFID card Time & Attendance Terminal

EP30 Pro is the new generation fingerprint time attendance terminal based on the Linux platform and supports cloud applications. EP30The 0 Pro contains a 3.5-inch color LCD and full capacitive keypad along with touch optical fingerprint sensor Full upgrade for EP30The 0 Pro with battery will enable your business anytime and anywhere. The web server function realizes the easy self-management of the device. The WIFI and Bluetooth function ensures the flexible application of the device.

Card Services

Type 1 - Design, Data Capturing, and Printing of Cards

- ❑ **Custom Card Design**: Creating a unique and personalized design for a card, typically incorporating the client's logo, colors, and other brand elements.
- ❑ **Data Capturing**: Collecting and encoding relevant information (like personal details and card functionality) to be stored on the card.
- ❑ **Card Printing**: The physical production of the cards, including all visual elements and embedded data.
- ❑ **Photo ID Cards**: Cards that bear the holder's photo for verification purposes, often used in workplaces, schools, or memberships.
- ❑ **Barcoded Cards**: Cards that contain a barcode. When scanned, the barcode can provide specific information linked to the card, such as an account number or membership details.

Type 2 - Basic Technology Features

- ❑ **Magnetic Stripe (Swipe) Cards**: Cards that store data in a magnetic stripe on the back. Data can be read by swiping the card through a reader.
- ❑ **Smart Cards**: Cards embedded with a microprocessor that can process and store data. Two common types include:
  - • **RFID Cards**: Cards that use Radio Frequency Identification technology for contactless transactions.
  - • **NFC Cards**: Cards that use Near Field Communication technology for close-range contactless transactions.

Type 3 - Advanced Technology Features

- ❑ **EMV Chip Cards**: Cards that carry an embedded microprocessor chip for enhanced security. They are named for their original developers - Europay, Mastercard, and Visa.
- ❑ **Dual / Hybrid Interface Cards**: These cards support multiple forms of transactions including magstripe, contact (chip), and contactless (RFID or NFC).

Type 4 - Specialized Card Services

- ❑ **Loyalty Cards**: Cards issued by a retailer or business to reward repeat customers, often accumulating points for discounts or rewards.
- ❑ **Gift Cards**: Pre-loaded cards that can be used as a substitute for cash at specific businesses.
- ❑ **Prepaid Cards**: Cards that are loaded with a specific amount of money in advance. They can be used until the pre-loaded funds run out.
- ❑ **Corporate Cards**: Cards issued by businesses for their employees to use for work-related expenses.
- ❑ **Co-Branded Cards**: Credit cards that are issued by a bank and a retail business. They often offer loyalty rewards or discounts at the associated business.

Type 5 - Card-Related Services

- ❑ **Card Personalization**: Customizing a card with individual-specific details, such as name, photo, or unique card design.
- ❑ **Card Replacement**: Providing a service to replace lost, stolen, or damaged cards.
- ❑ **Card Management**: A range of services for managing card-related needs, such as setting spending limits, blocking cards, tracking card usage, etc.
